

Building a simple webpage – DTVC Tutorial 1, Dr Philippe Blaettchen

- Go to https://www.w3schools.com/html/tryit.asp?filename=tryhtml_default
- Recreate the simple webpage (HTML) document displayed below
- If you get stuck, remember some of the key lessons about HTML
 - Everything comes with a starting tag <tag> and a closing tag </tag>
 - Use h1-h6 tags for headings
 - Use p-tags for paragraphs and div-tags to define sections in the document
 - Use a-tags and the href-attribute to add links
 - You can have multiple elements in the same style by defining a style within the <head>-tag

MY FIRST WEBPAGE

This is my first webpage

It also has some nice colors

And it contains a list with links

- [A link to Google](#)
- [A link to the Wikipedia](#)
